## SALMON IN KITSAP COUNTY STREAMS

kitsapsalmontours.org

Several species of salmon spawn in Kitsap streams. Chum and coho are the most common species here because they are adapted to the smaller stream width, depth, and habitat conditions. Though not as abundant as they once were, Chinook salmon and steelhead and cutthroat trout can be found in some areas. Even sockeye and pink salmon, which prefer lakes and larger rivers, are seen occasionally.
